## DETAILED ACTION

### *Remarks*

This action is in response to the initial filing of 4/14/2004, which has been placed in the electronic file of record, and to which this is a first action on the merits.

The examiner also notes that while many of the claims are rejected only under 35 USC 112 (see below), an expansion and detailed clarification of the meaning of 'unpredictable' could potentially move the prosecution forward in the instant case.

A final search of course would be necessary.

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-29 and 34-35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In particular, the applicant uses the phrase "unpredictable" in claims 1, 21 and 34, upon which all of the above listed claims depend.

The reason for the examiner's objection is that the phrase 'unpredictable' is open to various interpretations. Unpredictable could mean 'pseudorandom', in which case there is an underlying mathematical formula designed to simulate randomness.

Unpredictable could also 'be determined by one of the duration a keypad is pressed, the duration between two keypad entries or the duration between card activation and

communication with a card reader.' This second definition is based on the specification [0009] and might be suggest to the applicant by the examiner.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 2876

Claims 32 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rahman et al. (US 5,478,994).

Rahman teaches a secure credit card system (see column 1, lines 35-55; column 4, lines 30-62) wherein random numbers are generated sequentially and then compared against the expectations of a host computer. For financial transactions such as those involving a credit card the host computer would very typically belong to the financial institution which issued the card. As Rahman recites (column 4, lines 40-50) a comparison is made in order to confirm. A counter is present (figure 1, ref. 26); if the number of cycles is taken to be one, then the limitations of the claims are met.

#### ***Allowable Subject Matter***

Claims 30 and 31 are allowed.

The prior art of record fails to teach or fairly suggest the detailed manner of data exchange involving linear feedback shift register settings to achieve card security as recited detail in claim 30. The only detailed use of LFSR known to this examiner is by the instant applicant and the instant assignee.
